New Medicine Based On An 88-Year Old Theory By Albert Einstein Can Help Almost Everyone Who Is Sick Or Injured!

Dear friend,

Thank you for ordering your free copy of this report.

Do you have any concerns about aging, arthritis, high cholesterol, vision problems, memory problems, weight problems, Alzheimer's, back pain, heart disease, high blood pressure, prostate, problems, osteoporosis, cancer, fatigue, or any other type of disease?

If so, then what you are about to read just might make you feel better immediately. Here is why.

In 1930 a young scientist named Albert Einstein published a theory on a particular new function for light. Little did he know 43 years later, his theory would spark off the beginning of a revolutionary new invention that was soon to take the medical field by storm.

What exactly was Einstein's theory, and what is this revolutionary new invention that has taken the medical world by storm? Simple, he discovered what would later become known as a "Light Amplification by a Stimulated Emission of Radiation" or in simpler terms...

A Laser!

Since then, scientists and inventors from all over the world have developed, and perfected, many types of lasers for many different uses. Some lasers are used to play cd's in your stereo. Some are used to read price codes at your local super market. The military uses lasers to guide missiles and bombs to their intended targets. Doctors even use them to perform surgery on something as delicate as the human eye.

So, what has all this got to do with health issues? Well, there is a new type of laser that has been created, so effective against human disease, injury and illness, that it has rapidly changed the practice of medicine all over Europe and is now sweeping the United States.

This is a new type of "low-level laser" which produces unfocused light, so harmless, it has even been...

Registered With The FDA To Be 100% Safe

Amazingly our bodies are made up of approximately *five trillion* individual cells. Each cell must be able to supply its own vital energy. Every job our cells must perform on a day-to-

Page 2 of 21

Laser Light Institute, 56925 Yucca Trail, #547, Yucca Valley, CA 92284
Phone (760) 954-8488 Email: info@laserlightinstitute.info

No Medical Treatment Claims Are Made Or Implied.

All statements are based on clinical research done on low level laser therapy and/or anecdotal evidence. Your results will vary.

day basis needs to be done with the aid of this energy. Low level laser therapy can directly increase the production of this energy in our cells.

Your cells own “power plant” converts *light energy* into *cell energy*. This new fuel is then available to carry out the major repair and regenerative functions of our cells. This means there is more energy to dump waste, infectious and sometimes very dangerous products out of our system and replace them with healthy nutrients and proteins, which are our cells own building blocks for health.

This energy causes a rapid new formation of many proteins, including collagen (a clear sticky substance), which is our bodies own “repair” material. This newly formed collagen can then be used to regenerate damaged, sick or infected tissue, and is able to...

Repair Your Illness On A Cellular Level!

Fact: *Osmosis (the transfer of essential healing nutrients through cell membranes), cannot occur when the cell is sick. This then delays (and in many cases, completely halts), healing, which causes chronic disease, scars, fatigue and accelerated aging. Low level lasers reenergize injured cells and increases their energy output by as much as 150%, which then speeds and dramatically improves the healing process!*

You see if our cells don't receive enough of the energy they require, they will weaken and our bodies will eventually get sick. For us to be healthy, our cells need the right type, along with the exact amount, of energy. Every time you get injured or become sick, the energy flow to your cells gets disconnected or disrupted and your cells become weakened.

At that point, our defenses are not able to withstand disease or infection, and we become ill.

Low level laser therapy, or “LLLT”, floods the weakened or damaged cells with positive, healing energy and increases their energy output by as much as 150%. Any extra energy that is left over becomes a repair and restoration mechanism that is resonated throughout the body, which promotes healing energy to any sick or weakened cells, causing them to thrive once again.

It has been revealed that many diseases, disorders, disabilities, injuries, infections and illnesses, are a direct result of cellular dysfunctions. This has lead to one of the most important discoveries of the century...

Properly Delivered Subtle Energy Is The Answer To Many Disorders!

But are low level lasers in any way dangerous? The answer to this question, in one simple word is....

NO!

There are many different strengths of laser. The strongest of these can effortlessly cut thick pieces of steel. But low level lasers will not (and in most cases, physically can not) in any way hurt or harm you.

The FDA classifies lasers into four categories based on the intensity of the laser light output. Low level lasers, or “class 1” lasers, are described by the FDA as a...

“Non-Significant Risk Device”

This means when these instruments are used for treatment, the low level laser light emitted has no potential for harming the user or the recipient.

In the 2000+ publications and research studies that have been published all over the world, regarding low level lasers, there has yet to be one side effect, risk or negative symptom recorded in relation to the use of these lasers...and this even includes use on the eyes.

In fact, the only sensation reported by people who use these lasers, is the pressure from the laser itself resting on the particular part of your body. (This pressure is the equivalent of having a nickel placed on the palm of your hand)

Low level lasers work on a cellular level to restore damaged cells to health. Regardless of how long lasers are used, they will not create damage. People who use these lasers to cure their ailments, often refer to them as,

Healing Lights!

Inside each human being is our very own pharmacy. Inside this pharmacy is every possible drug, for every conceivable illness, injury or ailment. When activated correctly, our bodies are able to prescribe the “exact” natural drug, along with the perfect amount, required to treat and heal the illness.

Low level laser therapy does not claim to be able to do this. What it does claim to be able to do is to set up an environment that helps trigger a reaction within the body for it to begin *healing itself*.

Lasers are even able to trigger our bodies own natural painkiller, a “Morphine”-like chemical. They are also able to slow sensory nerve production which is why people who use the laser are able to feel immediate pain relief in a matter of two or three minutes...maximum!

Laser therapy is quickly becoming the therapy of the future. In 2004, the FDA approved low-level laser therapy for ...

No Medical Treatment Claims Are Made Or Implied.

All statements are based on clinical research done on low level laser therapy and/or anecdotal evidence. Your results will vary.

myofacial pain of the shoulder and carpal tunnel syndrome.

Dermatologists and plastic surgeons now use these lasers for treating skin blemishes, disorders, and problems. Dentists have used lasers for more than a decade to treat patients with soft tissue and gum problems.

The US government has even begun using low level lasers in its own health care facilities and the military has begun research on LLLT for its own use.

Hospitals and health care facilities throughout the world use these lasers on a day-to-day basis treating their patients.

Even General Motors offers laser therapy to injured workers in its in-plant medical facilities.

But perhaps the biggest advances in the use of laser therapy have come in professional sports. Medical doctors across the globe, from the NFL to the Olympics use this treatment because...

Lasers Heal Their Athlete's Sports Injuries In The Fastest Time Humanly Possible!

You see, if a top football or basketball player becomes injured, every day he remains "unhealthy" could cost his team millions of dollars. This is why these large sports organizations pay millions of dollars each year to find the smartest doctors with the latest, "cutting edge" technologies to help heal their players.

In an article by Lois Lindstrom, in the Washington Post, Tuesday February 17, 2004, it was said,

"The New England patriots won super bowl XXXVIII with some help from a little known form of laser technology that could change the way athletic injuries and chronic pains are treated. The therapy known as "cold" therapy, or low level laser therapy (LLLT), has been used internationally for 18 years to treat soft tissue injuries, cervical neck pain, carpal tunnel syndrome, repetitive stress injuries, tendonitis, hamstring injuries, arthritis, and wound healing among others."

Further down the article, it reads,

"In the week preceding the super bowl, Boston based registered nurse Ellen Spicuzza treated more than 10 Patriot players with cold laser therapy (it's sometimes called cold laser therapy because there isn't even a feeling of warmth from the treatment) for tendon and muscle injuries."

“A couple of days prior to the super bowl weekend, I treated {Patriots wide receiver} David Givens, who had a locked up hamstring”. She said, she had rotated the pen-like laser over the “belly” of his hamstring muscle for about five minutes. She said, “The laser released it”

Low-level laser light not only effectively penetrates muscle tissue; it also penetrates bone, which may explain the many dramatic results experienced by patients all over the world. Take this example of Adele Polakoff, a homemaker from New Jersey.

“Last summer I developed a bone spur on the heel of my foot that resulted in tremendous pain. Walking was a chore for me, and jogging (my favorite activity) was out of the question. Staff doctors in “The Foot Center”, a podiatry clinic in Hackensack, wanted me to undergo a series of cortisone shots combined with hot water and electrical stimulation.

When this treatment barely improved my condition, they had me wear an orthotic instep device in my shoe. When I questioned them about the prognosis, they responded, “If this orthotic doesn’t work, we’ll consider you to be a candidate for an operation on the effected heel bone.

Well this shoe device did not work and I did not want to undergo foot surgery. At this point, and looking for help everywhere, I called my longtime friend and dentist, Dr. Herbert Yolin of Brookline, Massachusetts, to see if he might have any suggestions.

He recommended using low level laser therapy on a series of acupuncture points, and also directly on the sore heel bone. The results were quite gratifying. As a result of using my laser instrument, which I had purchased months before to treat a dental problem, I am once again back to doing all the things I love-jogging with my dog Sash, going for long walks and dancing.”

Listen up: Here is some interesting information you should know about.

If doctors cannot find the cause of your ailment, which is often the case with chronic degenerative diseases, they try and suppress the symptoms with drugs.

Prescription drugs developed by pharmaceutical companies target a particular part of the body and “try” to trigger some type of response with the “hope” that it offsets the troublesome ailment by getting *some sort* of quick reaction which might reduce the patient’s symptoms and discomfort.

Often times what really happens is, these drugs suppress the immune system rather than stimulate it!

If drugs don’t work, then the doctors perform surgery. If surgery does not work, they then send you to a counselor, who will “try” and help you learn how to live with your problem.

Americans are getting fed up with this costly and inefficient medicine and are turning to alternative medicine for answers. In “The Journal of the American Medical Association”,

Page 6 of 21

Phone (760) 954-8488 Email: info@laserlightinstitute.info

No Medical Treatment Claims Are Made Or Implied.

All statements are based on clinical research done on low level laser therapy and/or anecdotal evidence. Your results will vary.

July 26, 2000, it was stated as fact, that, ***“Conventional Treatments Have Become The Third Leading Cause Of Death, With 225,000 Deaths After Heart Disease And Cancer”***... and that was six years ago!

Further on down the article, it states,

“More than 630 million visits are made annually to alternative medical practitioners, exceeding the total visits to all US primary care physicians. Americans annually spend 60 billion dollars on alternative medical care and the majority of that is paid out of the pocket, the proof is in the numbers above. If conventional medicine was successful in treating illness and chronic conditions, the use of alternative medicine probably wouldn't be increasing so rapidly.”

Further on it states...

“Longer Lasting Success Only Comes From Treating Causes Of Illness, Not Just The Symptoms”

As we already discussed, many diseases, disorders, disabilities, injuries, infections and illnesses, are a direct result of cellular dysfunctions. This is why treating the individual cells themselves with low level laser therapy has produced some miraculous results in the patients who have used it in the past, and continue to use it today.

Your body's immune system is constantly under attack (even as we speak). If our immune system is weak, invading bacteria can multiply and spread throughout the body. Some of these bacteria could potentially become lethal.

Low-level laser therapy is also similar to taking a daily dose of vitamins, minerals, enzymes and other supplements because it helps your body to continually fend off harmful organisms, and maintain a healthy metabolism.

This is why doctors are calling low level laser therapy...

“The Second Immune System”

What makes low level lasers so exciting is that they are no longer huge machines in hospitals that require appointments and large sums of money for each treatment. New technology is now able to create low level lasers the same size as your cell phone; some can even be as small as your toothbrush and can easily fit into your handbag or shirt pocket.

It's commonly known that the very best low level lasers in the world today have been invented by a doctor named Larry Lytle. He has studied lasers for years. Dr. Lytle is, without question, one of the most knowledgeable people in the world when it comes to low level lasers and how they can be used...

To Help Almost Every Health Problem Ever Experienced By A Human Being!

One of the biggest problems facing Dr. Lytle is, the results he receives from patients with all kinds of problems are so incredible, he has a very difficult time trying to explain to “non-believers” that his lasers...really do work!

They can't believe it until they try it for themselves. When they do...they are astonished by the results. Just listen to these two incredible stories,

Story A:

“I have been disabled since 1985 with immune and neuromuscular problems. I have had to avoid people and most places because of pandemic allergies, and must live in a completely pure environment with air and water filters. In December of 2001, a dental procedure, which was incorrectly performed, left my entire nervous system out of balance. The overwhelming tension building inside my body kept me from standing still and even lying down.

Some nights I felt as though I were falling into madness from the constant irritation of every nerve in my brain. My seizures and chemical sensitivity worsened. I was in total exhaustion and unable to perform even the simplest of tasks.

In consulting with Dr. Larry Lytle, we were able to correct the improper dental proprioception caused by the previous dental procedure and put my sympathetic and parasympathetic nervous system back into balance.

In addition Dr. Lytle showed me how to effectively utilize low-level laser therapy to relax the tight muscles in my jaw and neck. The pain that kept me awake 22hrs a day is now gone and my health is improving.

Until 3 weeks ago I was in a downward spiral and in utter despair. Thank you Dr. Lytle for saving my life and giving me hope. Sharon Fitzhenry”.

Story B:

“I have suffered from Psoriatic Rheumatoid Arthritis for 8 years. I received chemotherapy, many anti-inflammatory drugs, and cortisone and none of them worked. I met Dr. Larry and he demonstrated the laser on my hand that I could not open. After the demonstration, I could open my hand and the pain was gone! B.D., California”

Here's something for you to think about ...

There Are Literally Thousands Of People Like This Who Have Had Almost Miraculous Results After Using Dr. Lytle's Lasers.

And YOU could also receive this kind of benefit!

You see, the light waves emitted by Dr. Lytle's low level lasers are able to increase blood circulation to injured areas, reduce the incidence of infectious organisms, diffuse inflammation, relieve pain of all sorts, heal wounds, stimulate cellular activity and growth in both soft and hard tissue cells.

These advantages combine to promote healing of ailments, injuries and illnesses of almost all kinds. Just take a look at some of the many illnesses that have been reportedly helped, healed or completely cured as a direct result of Dr. Lytle and his revolutionary new lasers,

- Alzheimer's
- Heals surgical wounds
- Achilles tendon rupture
- Reduces chemo therapy recovery time
- Oral lesions
- Heart disease
- Headache
- Migraine
- Burns
- Acupuncture
- Acute myocardial infarction
- Allergies
- Blood irritation
- Bechterews disease
- Blood pressure control
- Bone regeneration
- Cancer
- Cardiac conditions
- Prevents restinosis after balloon angioplasty
- Decrease the number of angina attacks
- Eczema
- Alleviation of heart pain
- Suppression of lipid per oxidation
- Promotion of antioxidants
- Protection of erythrocyte membranes
- Reduction of fibrogin level
- Normalization of ant thrombin III
- Protective effects on erythrocytes caused by heart/lung machines
- Carpal tunnel syndrome
- Cerebral palsy
- Choral ulcers
- Depression, Psychosomatic problems
- Diabetes
- Gastric ulcers
- Tennis elbow
- Ear conditions
- Hearing loss
- Tinnitus
- Eye conditions
- Fibrositus
- Fibromyalgia
- Ginological problems
- Hemorrhoids
- Herniated lumbar discs
- Herpes, Simplex
- Lichen
- Low back pain
- High back pain
- Microcirculation
- Muchositus, connected with cancer treatment
- Muscle regeneration
- Nerve conduction

No Medical Treatment Claims Are Made Or Implied.

All statements are based on clinical research done on low level laser therapy and/or anecdotal evidence. Your results will vary.

- Ophthalmic problems
- Pain associated with any cause
- Rheumatoid and osteoarthritis

- Salivary gland disorder
- Sinusitis
- Spinal chord injuries
- Sports injuries of all types
- Strains and sprains of all types
- Tendonitis
- Burns
- Titinitis
- Tonsillitis
- Trigeminal neuralgia
- Trigger point therapy
- Thrombophlebitis
- Tuberculosis
- Urology problems
- Prostate problems
- Warts
- Whiplash and associated disorders
- Wound healing
- Shingles
- Osteoporosis
- Tumors
- Arthritis

- High Cholesterol
- Carpal tunnel syndrome
- Rheumatism
- Rhinitis
- Melanomas
- Nerve damage
- Vision problems
- Memory problems
- Fatigue
- Muscle problems
- Mobility problems
- Sciatica
- Hearing loss
- Joint stiffness
- Tissue damage
- Swelling of all kinds
- Bone problems
- Inflammation
- Bacteria
- Viruses
- Parasites
- Fungi

And best of all...

You Can Buy Your Own “Healing Light” Today!

You’ll learn all about how to do this in the letter enclosed in the envelope marked **“Don’t Open Until After You’ve Read The Entire Special Report.”**

So for now (because you’re not done reading yet!) just put it into the back of your mind that there is a **very special opportunity available to you with this package!**

You know, for some people, a package like this could mark the beginning of an entirely new life...a pain free, sickness free, energetic new life.

For others, it could make the difference of living a healthy life compared to a low energy life of sickness and disease. For others, it will help people who live with enormous pain every day of their lives to live a life 100% pain free.

But even if you are not sick, not injured or in pain, you should still finish reading this special report, your free gift and the enclosed letter. Why?

You ordered it, and it is 100% free.

And almost nobody lives out their entire life without having at least some kind of sickness or injury.

Wouldn’t it be nice to know that, if you, or any member of your family, do become sick or injured, you will at least know more about exactly how low level laser therapy might be able to help?

Dr. Lytle is a remarkable man in his 70’s. But what is even more remarkable about him is that his main goal in life is to make a difference in the world and the people who live in it. And he passionately believes low-level laser therapy is an important tool towards carrying out that goal.

This is why he is trying to expose the benefits of this revolutionary therapy to as many people as is humanly possible.

So, please finish reading this special report ... and your free gift right now while its fresh on your mind. After all, this is a free information package that will teach you about something that can possible make more of a positive change in your life then anything else you will ever learn.

Then open the second envelope and read about the special opportunity that is waiting for you. Every human being has a right to be healthy. You don’t have to be sentenced to a life of pain and illness ... don’t cheat yourself it’s your life. You owe it to yourself to live it as great and as healthy and pain free as possible.

You Have Absolutely Nothing To Lose And Everything To Gain!

Do it now and don’t waste another second, you’ll be glad you did.

About Dr. Lytle

**He's Trained Dentists, Physicians, Chiropractors,
Naturopaths, And Health Professionals All Around the World...**

**...Invented Some Of The Most Advanced Low-Level Laser Devices
The World Has Ever Seen...**

and...

...Has Helped Thousands Of People Just Like You Worldwide!

To the patients he has helped, Larry Lytle has become known as something of a miracle worker. His low-level laser technology has helped, healed and sometimes completely cured some of the most painful, dangerous and sometimes lethal sicknesses, injuries and diseases known to man.

Born in 1935, on the border of the Pine Ridge Indian reservation in South Dakota, during the great depression, Lytle and his family, consisting of his mother, father, two brothers and four sisters, all shared a sod house with a dirt floor, log and dirt chinked sides, and a sod roof.

After his graduation from Chadron State College in 1956, Lytle taught high school science and coached basketball at Hot Springs, SD, for two years until he was inducted into the army.

While in the army, Larry completed the college courses required for dental school. After graduating from the University of Nebraska, College of Dentistry, in 1964, he went on to join his brother in a general dentistry practice in Rapid City, SD.

Due to his huge appetite for knowledge and learning, Larry exceeded in many facets of general dentistry, including advanced tissue and bone grafting techniques for preserving periodontally involved teeth, prevention, and mercury replacement with composite materials.

Preventive Dentistry was his passion. He was an early member of the American Society for Preventive Dentistry and started a state chapter in South Dakota. He began lecturing and taught lay people and professionals about decay and gum disease.

He continued his education by joining the International Academy of Preventive Medicine and served as president for five years. After incorporating the Academy of Nutrition into their organization and changed their name to the International Academy of Nutrition and Preventive Medicine (IANPM), Dr. Lytle and his Academy became the premier professional organization promoting alternative and complimentary care at that time.

IANPM had the distinction of publishing the only refereed journal in preventive medicine. During his tenure at IANPM, he had the privilege of learning from such great pioneers as Linus

No Medical Treatment Claims Are Made Or Implied.

All statements are based on clinical research done on low level laser therapy and/or anecdotal evidence. Your results will vary.

Pauling, Rodger Williams, Emanuel Cheraskin and many others. It was an exciting time for him. He became “convinced” that prevention, nutrition and other forms of what we now call “complimentary” or “integrative” medicine were very important, and he had a new understanding of the limitations of traditional dentistry.

His interests led him to study cosmetic dentistry along with his daughter, Dr. Kelly Lytle. They were the first, and only, father/daughter team to be accredited by the Academy of Cosmetic Dentistry.

In the early 1990’s, Dr. Lytle learned to use cutting lasers to contour gum tissue. His interest in lasers earned him a category II accreditation with the Academy of Laser Dentistry, which in turn lead to an invitation to speak at the World Congress on Lasers in Dentistry in Singapore in 1994.

He then became interested in low-level lasers. However when he researched this type of laser, he found many inconsistencies. He could not understand how one study could show amazing results while another study of the same type of laser would show a poor result, so he set out to discover why the world’s low-level lasers were so inconsistent.

This is where the rubber met the road for Dr. Lytle. He combined his studies with his basic knowledge of energy and propelled himself into a new project – to design...

A Low Level Laser System That Worked...Consistently!

Since then, Dr. Lytle has created and developed numerous laser devices that have gone on to help and heal thousands of people around the world and has earned himself the notoriety and respect of his peers, his colleagues, his friends and his patients throughout the world.

To this day, approaching 70, this remarkably young looking man insists on continuing his work, speaking at free seminars, teaching as many people as he can about the beneficial effects of using this remarkable technology on themselves. And get this; he very rarely (if ever) derives any money, or profits, from his work.

Look At What Some Of The Doctors And Patients Who Use Dr. Lytle’s Amazing “Healing Energy” System Have To Say About Its Effectiveness!

Note: The following are individual case studies only, and are not intended to diagnose, treatment or in any way, make any medical treatment claim regarding any human health problem. This information is provided only as validation of how others are using low level laser therapy. Absolutely no medical treatment claims are made by either the manufacturer of these laser products nor any business associated with the sale of these products. Your results will be different.

Prostate Problems:

Thank you again for introducing me to low-level laser therapy. I have been able to control my PSA counts by lasering directly over the prostate.

Page 13 of 21

No Medical Treatment Claims Are Made Or Implied.

All statements are based on clinical research done on low level laser therapy and/or anecdotal evidence. Your results will vary.

Diabetes:

I have experienced diabetes most of my adult life. In January of this year, my doctor gave me one month to get my blood sugar count down (254) or she was going to start me on insulin. I wasn't much interested in insulin as everybody I knew who had started on it was now dead.

I started lasering my pancreas with the Q1000 laser for one-three minute session a day. During the first week, my blood sugar count dropped about 20 points per day. I backed off to lasering 2 or 3 times per week, and my blood sugar counts have now stabilized – without any additional treatment methods - at 135.

Robert Rumph, MT

Severe Migraine

A patient called in and was about to cancel her appointment due to a severe migraine/headache. We convinced her to come in and with one two-minute demonstration using low level lasers; we were able to eliminate the migraine...and...all symptoms.

Dr. Herb Yolin, MA

Recurring Sciatic Pains In Leg

Elaine had recurring sciatic pain that ran down her leg. Her chiropractor was sometimes able to provide a little help, but the pain usually persisted. She came in one day to pick up some vitamins, and I suggested we give the low level laser a try. Elaine placed the laser on the origination point of the pain for two three minute sessions and then went home. She called me up the next day and said, "It's phenomenal, the pain is gone – in less than 24 hours, it's completely gone".

David Getoff, CA

Crippling Arthritis and Pain

I had severe crippling arthritis with considerable pain. After just two days on Laser Assist Compound and the low level laser, the pain was 80% gone! When I was without my laser for a few days, all the pain returned. When I started using the laser again, I was nearly pain free for the first time in years!

S.S., Florida

Foot Pain

I am a diabetic. I have been keeping it under control with diet and having the pancreas reflex points worked by a foot Reflexologist. These points were always very, very painful but after just one laser demonstration the pain was gone.

Twenty Year Abdomen Pain

A patient told me of a constant, dull aching pain in the lower right quadrant of her abdominal area around the waistline. She had been to countless physicians who had performed dozens of tests without determining the origin of the pain, and who were recommending exploratory surgery. My patient had no interest in surgery, and had resolved to simply live with the pain. I suggested we give low-level therapy a try. She lasered the area of pain for two three-minute cycles, and I asked her to call me the next day. I didn't hear from her for about two weeks, but when I saw her, she said, "I want to let you know that that laser treatment was phenomenal – the pain was completely gone the next day – understand – for the first time in twenty years, I was without pain".

David Getoff, CA

Intense Neck and Shoulder Pain

I had been experiencing intense neck and shoulder pain which would radiate down my arm causing my hand to become numb. I tried three different types of prescribed pain pills and none gave me any relief. At the Atlanta Market, I was given a demonstration of your laser. Within the hour, the pain was almost gone. It was the first relief I had had in four weeks. I had a second demonstration and the pain was completely gone in one hour. Your product is remarkable!

P.C., CA

Leg and Skin Cancer

I was first introduced to the laser when it was demonstrated on my very sore leg. The pain was gone in just a few minutes. I bought a laser and have been using it on my 83-year-old mother for severe pain from amelodosis, which is a precursor to multiple myeloma, a type of cancer. Amelodosis causes big patches on the skin, which are very painful. The laser controls the pain for my mom and makes life easier for her.

Dr. B.E.

Jaw Pain

I have had pain in my jaw joint and muscles as well as an infection in my gums and bone. I began using a herbal remedy and used the low level laser daily. Now, after just two months, I do not have any jaw pain and my dental hygienist says my dental infection is gone.

R.R.

Rheumatoid Arthritis

I have suffered from Psoriatic Rheumatoid Arthritis for 8 years. I received chemotherapy, many anti-inflammatory drugs, and cortisone and none of them worked. I met Dr. Larry and he

demonstrated the laser on my hand that I could not open. After the demonstration, I could open my hand and the pain was gone.

B.D., CA

“Our Families Magic Wand”

We have had great success in using our low level laser to clear up sinus infections, skin rashes, etc. My wife calls it her “Magic Wand” when it comes to keeping the family healthy! Thank you for producing a great product!

Brad Landon, Washington

Ruptured Right Knee and Arthritis

My name is Doug Phillips, President of the SD Racquetball Association, and competitive open player. I am 45 Years old and have played multiple sports all my life. In 1990 I ruptured the anterior cruciate ligament in my right knee, and was told by two different orthopedic surgeons that I would need total knee replacement.

I didn't have the surgery, and continued as best I could. An active lifestyle while fighting the pain with a combination of anti-inflammatory drugs and prescribed pain killers – neither of which worked very well at all – the knee was still inflamed and caused a great deal of pain. While at the YMCA for a racquetball session in September 2001, Dr. Lytle allowed me to use his low level laser on my right knee. I lasered for about three minutes before and after playing that day.

The results were amazing! I was able to play a full hour and a half of racquetball and go back to work without any pain or inflammation! I continue to use the laser approximately three times per week for the next three weeks and continue to be amazed by what low level laser therapy has done for me. My right knee is pretty much back to normal, with no pain and no inflammation. Thank you Dr. Lytle for introducing me to this incredible equipment!

Doug Phillips, Rapid City, SD

Severe Headaches

Following heart surgery, my husband began experiencing severe headaches, which the doctor said was caused by a condition called arteritis (inflammation of the arteries in the head). The prescribed medication took about one hour to stop the pain. The last time he had one of these headaches, we used the laser on his head. The pain was gone in less than two minutes! This machine is wonderful! We are so relieved to have this machine if for nothing else to relieve his headaches. However, it eliminated my arthritis pain and his sciatic nerve problem as well.

Serious Whip Lash

I was stopped and hit from the rear at 35 mph causing a serious whiplash injury. After a week of chiropractic adjustments, acupuncture and analgesics, the pain was still severe. After one demonstration of the low level laser, the pain has gone and has not returned for one week. A side benefit was my energy levels really improved as well.

Dr. D.H., South Dakota

Hearing Loss

I had nearly lost my hearing and, after tests, ordered \$4,000 worth of hearing aids. After just one demonstration of low level laser therapy on my ears, my hearing returned. I went back to the doctor and he re-checked my ears and said that I no longer needed the hearing aids and refunded my money.

T.M., Oregon

Severe Allergy Attack

My grandson had a history of asthma-type allergy attacks, which has resulted in him being taken to the emergency room several times. Recently, when he was staying overnight with me, he had an attack. I immediately used my laser on his lungs and throat. Within minutes, he had stopped coughing and gone back to sleep and slept soundly all night.

Sprained Ankle

My Electrician fell off the ladder and badly sprained an ankle. I demonstrated the laser for 3 days on the ankle. The Electrician kept working kept working 10-hour days without pain and at the end of the third day, there was no swelling, nor was it black and blue.

Arterial Fibrillation

I just wanted to write a quick note thanking you for your work in these lasers. Over the past five or six years I have experienced arterial fibrillation. In April of this year, I had an episode. I lasered my chest using my low level laser and my heart changed to its normal rhythm. Thank God!

Lianne Lang.

Hearing Improves

I was having problems with my hearing, and used the 808 in the ear for 6-8 breaths (a few times over several days) and my hearing has improved!!

Osteoarthritis In Pet Dog

We have been using the LLL for two years. Recently, one of my long-time patients, Paco (12 year old yellow lab) came for a consult on osteoarthritis. Paco has been on glucosamine and Rimadyl for several years. He has severe bilateral hip dysplasia. Ms. Cole had read the paper that we had written about LLL therapy and wanted to start Paco on the treatment. He received one session and the owner raved about the fact that he actually climbed stairs to go to bed. Paco had not been upstairs for some time. He is currently on a weekly schedule and is a lot more comfortable than when he was on drug therapy alone.

Severe Burn

My hot tub thermostat malfunctioned and I scalded my foot half way up my calf in 140° water. The emergency room doctor said it was a severe 2nd degree burn and that it would take at least four weeks before I would be able to put long pants back on – and longer to completely heal. I used both the Resonator and Rotary lasers immediately and twice daily thereafter. By the 5th day, all the pain was gone and I was back to work. By day 9, the skin was nearly completely healed – having just the appearance of slight sunburn. The lasers not only helped control the pain, but also reduced the time needed to heal this burn from at least 30 days down to only 10!

Broken Arm

My two-year-old daughter broke her arm right above the wrist. Her doctor was concerned that it was so close to her growth plate. We lasered the break through the cast 2 times per day for a couple of weeks. When she returned for her checkup, the doctor was surprised at how well the break had healed.

Vision Improves

We bought the laser initially to help our 24-year-old son Stephen, improve his brain functioning. Stephen has autism. Three months after starting the laser, Stephen got a job and has held it for six months. This is after losing three jobs and going 2 years without one. He also tried it for 30 seconds on each eye every other day. After a month, he had his eye exam. The doctor asked what he had been doing as his right eye improved from -3.25 to -1.75 and his left eye from -3.5 to -3.0.

Dislocated Knee

Two years ago I was house boating on Lake Powell when a chance wave rocked the houseboat. It was an awkward position, straddling a railing and my left knee was dislocated. I clearly heard the knee pop out of joint, and immediately I lost the ability to walk or support my own weight. I was assisted into a sitting position and immediately began using the Q 1000 laser above, below, and all around my knee. Since we are out in the middle of the desert, the only therapy that was available was ice, aspirin, and our laser (which I always take with me when I travel.) Over the course of the next several days I continued to use the laser anywhere from two to five times a day. By the second day I was able to walk unaided, although I did have some pain and considerable limitation of movement. After the return to civilization, I had three appointments with a chiropractor, the few acupuncture appointments, and I continued to use the laser on a daily basis. This régime, when combined with some nutritional supplements, resulted in the complete relief of symptoms, and my ability to return to normal function and exercise. As far as I can tell my knee is completely recovered except for occasional twinges. I believe the laser eliminated the need for surgical reconstruction of my knee, and I will be forever grateful that I had the laser with me and available for immediate treatment. It's little wonder I carry the laser everywhere I go now!

Laser Eliminates Need For Root Canal On 7-Year Old

My seven-year-old daughter was involved in a collision with another student in karate class. Her mouth and another boy's head smashed together, loosening 4 of her teeth as well as causing a severely swollen lip. She could not open or close her mouth. We rushed her to her dentist, who said the teeth would either have to be removed or have root canals performed. He indicated he would make a decision in about a week. I treated her twice daily with the Resonator laser, and within one day all swelling had been eliminated. After five days, she could open and close her mouth normally, and her teeth appeared to have tightened up. She saw her dentist and was told she didn't need any further treatment at all.

Wrist Inflammation Improves, Wins State Tennis Title

My daughter Whitney had a severe wrist inflammation in 2003. She had pain in her wrist from overusing it on the tennis court. She could not play tennis without pain. Whitney received one demonstration with the Q1000 and 808 Enhancer and her wrist felt better almost immediately. After the demonstration, and despite playing tennis at a 100% level, the pain never returned. Whitney ended up winning the 2003 SD high school singles title. I would like to thank Doug Phillips for introducing us to this incredible technology!

More Nerve Fibers In My Eyes – Vision Improves

I want to thank you for what is *one of the best investments I have made*. On the advice of my dentist, I sought out more information on the low level laser that you offer. I purchased the laser a year ago and I want to share some of the results that I have seen. I went to my ophthalmologist a week ago and had several tests on my eyes. He was checking the nerve behind the eyes and was surprised that my eyes were better than they were on my last checkup which was about 7 months ago. He said that there were more "nerve fibers". I was delighted, but not totally surprised, because I had noticed that the incidence of "floaters" and "lights" were decreasing. I haven't had any at all for the past 3 months. I have used the laser for other aches and pains, but the eye test was very dramatic to me. Being 69 years old, I would have been satisfied with "holding my own". Needless to say, I will continue use of the laser. Thank you Dr. Lytle.

Jacqueline Harbin

Note: The preceding are individual case studies only, and are not intended to diagnose, treatment or in any way, make any medical treatment claim regarding any human health problem. This information is provided only as validation of how others are using low level laser therapy. Absolutely no medical treatment claims are made by either the manufacturer of these laser products nor any business associated with the sale of these products. Your results will be different.

Will laser therapy and “healing light” produce these same types of results for you?

Maybe ... maybe not.

But these are only a handful of literally thousands of positive success stories from people ... just like you ... who have benefited from low level laser therapy around the world.
